Research Interns- Arabic Language Technologies

Qatar Computing Research Institute (QCRI) is seeking candidates for Research Intern to work within our [Arabic Language Technologies](#) team. We offer unique opportunities for strong careers spanning basic and applied research in the areas of language technologies, including Natural Language Processing and Information Retrieval with particular emphasis on Language Understanding and Machine Translation

The research of the ALT team focuses on the following areas:

- Information Extraction and Retrieval based on deep linguistic analysis and natural language comprehension. This includes developing a flexible pipeline of NLP and IR components that can be used to build and deploy state-of-the-art systems such as question answering, textual entailment, paraphrasing, and summarization, among others.
- Multilingual speech and text processing, which includes speech recognition (especially for Arabic and its dialects, and English) and machine translation, with applications such as lecture translation, translation for medical and tourist domains, and supportive tools for professional translators and interpreters.
- Optical character recognition for historic documents, especially for Arabic heritage material.
- NLP/IT for education, in particular the development of an Arabic e-book reader and explorations in computer assisted language learning.

ALT bases its research on empirical and machine learning-based approaches, focusing on aspects such as robustness, portability, adaptation and multilinguality (making progress in parallel in English and Arabic).

Knowledge of Arabic is not required but is considered a plus. Having background in any of the following topics related to machine learning is valued as well:

Discriminative learning, including SVMs and other max-margin approaches | Graphical models | Structure learning for sequence tagging, segmentation, parsing, etc. | Advanced data representation through kernel methods and kernel machines | Online learning and active learning | Semi-/Weakly-/Un-supervised learning | Domain adaptation, multi-task and transfer learning in NLP | Relational learning | Clustering approaches | Language modelling: factored, continuous space LMs

Job Description:

- You will work on one of the research projects in the Arabic Language Technologies group. For more information about the current projects, please visit [our projects page](#).
- Please indicate in your application which project you are applying for.
- Your work will contribute towards publications in top tier conferences and journals, solutions and research prototypes, and intellectual property in the form of disclosures and patent applications.

Requirements:

- Research Assistant/Associate (6-12 months):
 - BSc or MSc in computer science or a related field from a top-tier institution.
 - Strong academic record.
 - Demonstrated systems-level programming skills.
 - Commitment to research.
 - Strong communication and collaboration skills.

Research at QCRI:

[QCRI](#) supports Qatar Foundation's mission by helping to build Qatar's innovation and technology capacity. It is focused on tackling large-scale computing challenges that address national priorities for growth and development. Moreover, QCRI is a national research institute conducting world-class applied computing research that transforms the way we interact with each other, enables new discoveries, and accelerates development of society.

A proud member of [Qatar Foundation for Education, Science and Community Development](#), QCRI is building a multidisciplinary research group in computer science with passion for innovation and excellence in research. The QCRI research program offers a collaborative, multidisciplinary team environment, endowed with a comprehensive support infrastructure.

Research in Qatar:

Qatar has made a commitment to be a leading center for research and development excellence and innovation. Home to a globally regarded scientific research funding organization, a world-class hub for technology innovation and commercialization, and prominent research institutes operating at the frontiers of science, Qatar Foundation Research and Development is spearheading a national endeavor to fulfill this commitment.

The country is home to branch campuses of numerous world-renowned universities such as Carnegie

Mellon University, Texas A&M University and Georgetown University, major oil and gas companies, telecommunication companies, and international media organizations such as Al Jazeera. These local institutions offer opportunities for research collaboration to tackle new computing research challenges of practical importance.

Package:

QCRI offers a unique opportunity for strong research careers and a highly competitive compensation package including attractive tax-free salary and additional benefits such as furnished accommodation, and excellent medical insurance.

To apply, please [click here](#) and select "Research Intern- Arabic Language Technologies."
